SXM112A

Sound-Shaping Powered Monitor Road Ready

Built to take a beating night after night, week after week, the SXM112A's cabinet is made of thick birch plywood, features a heavy-duty steel grill that's built to last, and is covered in a rugged black textured finish that is scratch and dent resistant. Recessed handles makes the SXM112A easy and safe to move from rehearsal space to stage and back again while heavy-duty rubber feet ensure that it stays put no matter how much volume you pump through it.

Superior Sound Quality

The SXM112A delivers a big sound with a high-performance 12-inch LF driver (2-inch voice coil), and an exacting 1-inch HF driver. What's more, it utilizes a trapezoidal design which greatly decreases the resonance of the standing wave in the cabinet for a more true and exact sound reproduction. The SXM112A is the perfect solution for club installations, rehearsal spaces, gigging musicians, mobile DJs, and houses of worships who need additional sound reinforcement.

FEATURES

- 800 Watts Class D power
